Attack Surface Management Platform

sweepatic SECURITY

We make organizations cyber resilient by mapping, monitoring and managing their online footprint.

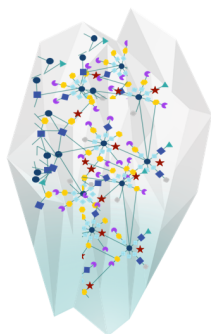

Attack surfaces are large, complex and very rapidly growing, which makes it hard for organizations to keep track. They are like icebergs...
The Sweepatic Platform helps organizations avoid cyberattacks and improve their cyber resilience, while saving them time and money.

BUSINESS USE CASES

Continuous Asset Discovery
Close gaps in situational awareness & Control your internal process

Attack Surface Monitoring
Discover your attack surface & Understand and track its evolution

Attack Surface Reduction
Eliminate shadow IT & Remediate issues

When you know, you can protect!

- Inventorize all internet seed domains
- Remove old subdomains
- Clean up forgotten web applications
- Clean files leaking sensitive metadata
- Detect unsecure websites
- Fix invalid SSL certificates
- Discover open ports
- Patch outdated technologies
- Consolidate cloud providers
- Decommission hosts

ABOUT US

Sweepatic is a young innovative cybersecurity company operating on a global scale making our customers cyber resilient. Our innovative cloud platform maps, monitors and manages attack surfaces across the world producing high impact insights and easy-to-remediate findings.

Sweepatic is headquartered in Leuven, Belgium and is backed by eCapital, a leading German venture capital firm. To learn more about Sweepatic, visit sweepatic.com or follow Sweepatic on social media:

Sweepatic NV
Kapeldreef 60
3001 Leuven, Belgium
BE 0666.404.747

FEATURES

24x7. Continuous monitoring built around advanced reconnaissance techniques.

Easy onboarding. Cloud-based SaaS not requiring any on-premise installation.

Unparalleled depth. Non-intrusive, passive discovery from the infrastructure up to the data layer.

Clear and simple. Easy-to-remediate findings and insights with high impact.

BENEFITS

With Sweepatic, you will:

1. **Save time** by analyzing your attack surface in hours instead of weeks.

2. **Avoid millions in damages** by remediating issues in real-time.

3. **Unburden your IT and cybersecurity teams** by augmenting them with an automated solution.

4. **Save on IT spending** by eliminating unnecessary online assets.
